13.03.2024

Client:

Frank de Lepper
f.delepper@fontys.nl

Location	R10 2.60
Starting time	13:30
Duration	30min
Ending time	14:00

Team:

Nyambe Imasiku - 525792@student.fontys.nl
Samuil Kozarov - 527531@student.fontys.nl
Ivan Anastasov- 525948@student.fontys.nl
Alexandru Mazilu - 525933@student.fontys.nl

Meeting Leader:

Samuil Kozarov - 527531@student.fontys.nl

Secretary:

Alexandru Mazilu - 525933@student.fontys.nl

Summary:

- Clarifying the final version of the project plan.
- There are 3 shifts of 4 hours each per day.

Discussion about the departments and employees:

- Department manager should be responsible for employees

- Department manager and CEO should see information about employees. They should only be responsible for their own department schedule, not others.
- If an employee no longer works at the company he should be deleted from the functionalities like schedule planning, but keep his records for at least 7 years.
- Employees can only change password and contact info.
- All workers must have 24/7 access to the system.
- The employees should mark only when they are unavailable, not available.
- In the near future generate a shift schedule automatically based on the availability of employees.

URS Discussion:

- Non-functional and functional requirements - Enough to be able to manage employees, products, departments, shifts, employees can see shifts, they can indicate availability, see products available depot, order new products, receive products.
- Not all use cases need a pre-condition.
- Have 10 other use cases beside log in and log out.
- If there is no trigger the first step is always performed by the actor.
- No need to mention the actor closes the window extension.
- No 2 consecutive actions performed by the actor.
- Don't be too descriptive. Make a list of requirements and refer to them when necessary.
